main.py

Share Run

```python
# Excercise_1 Variable Declaration:
print("Excercise_1 Variable Declaration: \n")
a="Asad is enrolled in AI."
b=123
c=1.2
print(type(a),"\n",type(b),"\n",type(c),"\n")

# Excercise_2 Variable Swapping:
print("Excercise_2 Variable Swapping: \n")
d="Asad"
e=12
print("Result before swapping: ", d,e)
d,e=e,d
print("Result after swapping: ", d,e)
```

Output

```
Excercise_1 Variable Declaration:

<class 'str'>
 <class 'int'>
 <class 'float'>

Excercise_2 Variable Swapping:

Result before swapping:  Asad 12
Result after swapping:  12 Asad
